Tialoom

Play Game, Enjoy Time and Make Money Even Without Any Initial Investment.

Introduction

Tialoom is the first game set in a hotel environment full of entertainment, competition, and rivalry! This game is built on web 3.0 with implemented play-to-earn and free-to-play elements, allowing players to combine an unforgettable experience with a new income stream. Its biggest advantage among all others is the opportunity to build income in hundreds of USDT without any initial investment! Thanks to web 3.0 and blockchain mechanics, players can own their first non-fungible tokens (NFTs) firstly in the form of keys and later in the form of rooms. They can trade their NFTs with other Tialers on the marketplace, including sell, exchange, or lending. Moreover, due to non-fungible tokens, the possibilities within the game itself have expanded, and therefore their future, also thanks to Tialoom, is undoubtedly bright. At Tialoom, we uphold the motto of quality over quantity and therefore aim to deliver a high-quality project to the market intended for those who need it most. Our common team goal is to create a project where not only investors with large starting capital can make money. Therefore, the uniqueness of Tialoom also lies in its division. Tialoom Investing is primarily aimed at investors and people looking to maximize their passive income and take advantage of a more favorable starting position. In contrast, Tialoom Gaming is focused on people who want to compete, actively spend time online with friends, and at the same time build a stronger financial position with zero/minimal initial investment.

Earning Mechanism

Tialoom offers players various options to build financial profit including passive income, competition, trading NFT items, or more/less riskier activities. It is up to the player himself to choose the strategy they want to adopt in the game based on what level of risk they are willing to take.

NFT room

In the Tialoom Investing, players can earn rewards in the form of in-game currency TOOM every day, which amount depends on the rarity and level of their NFT room. However, if an owner does not want to passively hold their room in the wallet, they can lend it to another player on the marketplace who has a lower rarity room and so through lending, can obtain TOOM more quickly and in larger quantities. The amount in ETH for lending is determined by the owner himself. Exclusive rooms such as Legendary, Mythical, and Special, due to their rarity, receive a monthly share of the hotel's profits where they possess their room. The monthly commission earned by room owners depends on the hotel's income during that period.

Additionally, if a player wants an XP boost, they can burn their room and receive an NFT item in return.

On the other hand, the Tialoom Gaming section is focused on active game users, and therefore the NFT room is a core part of the game itself. Thanks to the NFT room, players have the opportunity to win ETH/TOOM in the main game based on room ratings. Influenceable room attributes, especially aesthetics, will be taken into consideration.

Premium games

Premium games are specifically designed for a selected group of people who receive whitelist for these competitions upon meeting the criteria. Each player participating in such a competition automatically wins a certain amount in ETH based on their ranking.

NFT items

If a player owns more rooms and wants to increase their level faster, they can burn one of the rooms to automatically receive an NFT item in the form of a Parking Slot or Balcony.

This action speeds up the leveling of other rooms for a certain time period. The NFT item can only be used once. However, if a player chooses not to use the NFT item for their room, they can sell it on the marketplace.

The Tialoom technology enables players to explore diverse avenues for earning, such as:
1. Hotel Profit Commission
2. NFT Lending
3. Rating - Main Game
4. Premium Games
5. Sale of NFT items

Goals

The goals of Tialoom also bring with them many challenges that all of us see positively, thanks to well-defined objectives and targets. Tialoom draws inspiration only from the best in the market and strives to continue pushing the limits of P2E game development. Despite the significant impact of NFTs on our game, the main focus remains on providing a positive gaming experience for all participants, regardless of their starting budget.

Target Audience

Based on large analysis of the most played play-to-earn games and their interests, a conclusion was reached that describe Tialoom's intention. What is truly intriguing is how few games actually provide their users with real profit without any initial investment. Approximately 70% of these games offer this opportunity only after a certain initial investment is made firstly by the player. In contrast to these games, Tialoom aims to provide the opportunity to earn hundreds of USDT right after connecting crypto wallet to the game.

Main focus:

Age	Although Tialoom has a broad focus, the main targeted group is between 18 to 45 years old.

Social Class	The technology and economy of Tialoom cater to a diverse range of people from lower social classes to the highest. The game mechanics also allows potential gaming enthusiasts from lower social classes to participate and improve their financial situation.
Geography	The game's range based on geographical location is diverse, but the main focus is on North America, Europe, and the Middle East.
Lifestyle	Tialoom is a game primarily designed for people who have a lot of free time and enjoy spending it indoors, especially playing games on mobile devices.

User's Choice

By combining the qualities of leading games in the play-to-earn sector, their achieved successes, and the potential of Tialoom, we aim to build a broad and strong fan base. We believe that by merging people's interest in these types of games, the gameplay of Tialoom, and the outcomes of other games, Tialoom can attract a mass audience and become the top choice for many users. However, we are aware of the long journey ahead for this project, and therefore we need to fully focus on the complex development of the project, fulfilling its potential mainly to meet the community's expectations and the project's timeline.

Financial Freedom

The gaming experience not only provides entertainment but also brings a sense of responsibility towards finances and loved ones for many. In these challenging times affecting millions globally, Tialoom is entering the market with a unique product! The modern market allows the project to help people while also avoiding failure due to the initial obstacles of the project itself.

Gameplay

Tialoom is the first game played in a hotel environment. Own your NFT room, level up, earn passive income, compete with other players, and win special rewards! NFT rooms offer, among other features, access to exceptional tournaments with Ethereum prizes!

Daily Income

Tialoom provides players with a daily reward in the form of TOOM, motivating players to open the game every day and claim their free profit! Players can then use TOOM to upgrade the level of their room, purchase non-NFT items to increase their chances of winning in Ratings, or buy additional game accessories! The reward will be evenly distributed among all rooms. However, the amount of this reward depends on the rarity of the room held by the user. The rarer the room, the higher the daily reward will be.

NFT room	Daily Income
Starter room	0,1-0,5 TOOM
Common room	0,5-1 TOOM
Uncommon room	1-1,5 TOOM
Rare room	1,5-2,5 TOOM
Epic room	2,5-4 TOOM
Legendary room	4-6 TOOM
Mythical room	6-8 TOOM
Special room	8-11 TOOM

Ratings

The gameplay in the game is primarily based on rating rooms, which is available to anyone who owns an NFT room. Anyone can participate in this game regardless of the rarity of their room. However, exclusive pools will be built in the game specifically for the most engaged players, giving them access to the most advantageous competitions with the biggest rewards.

It is expected that one such game will last approximately 1 minute, and aesthetic aspects of the room will be taken into consideration, although other aspects that increase the chance of winning may be implemented during the game's development process.

We want to give players the best possible chances of winning while also allowing the largest number of players to participate simultaneously. Therefore, we will choose a process in which each rating will include 3 to a maximum of 50 participants.

Players in pool	Whitelist	Rewards
3	Only holders with Legendary NFT room or better	ETH
5	Only holder with Epic NFT room or better	ETH/TOOM
10	Everyone with NFT room	ETH/TOOM
20	Everyone with NFT room	ETH/TOOM
50	Everyone with NFT room	ETH/TOOM

For each rating, there will be an entry fee of a certain amount, depending on the prize pool.

Premium Games

Tialoom Gaming offers two types of premium games.
On one hand, there will be games that only players with whitelist can participate through reaching a specific level with their avatar.

On the other hand, there will be an additional game that offers newcomers an easier start in the whole game.

Everyone who participates in such games will win TOOM or ETH. The amount won also depends on the player's ranking in the game.

Rent/Sell NFTs

If someone prefers a more passive approach to gaming and enjoys passive income, they can benefit from NFT Lending of all room rarities on the Marketplace. This system provides an opportunity for large investors to offer their rooms to smaller players who may not have sufficient budget to purchase a whole room or who want to earn more in-game currency TOOM over a certain period of time than they would on their own room.

After the end of lending, each room will have to be cleaned. For the player, this practically means that after the end of lending, their room will be locked for some time and they will not have the option to lend the same room again for a specific time period. This system will provide to all players equal opportunity to lend one's room.

In addition to NFT Lending, selling will also be available on the Marketplace, which people can use if they wish to stop playing the game.

Room Design

The room design in Tialoom Gaming is a primary part of the main game. Every piece of furniture is a non-NFT item, and the player can choose its color and material.

When designing the room, players can choose locations to place the furniture.
These locations can be free or paid. Players who want to significantly increase their chances of winning can invest in these locations and purchase them using TOOM.

In the future, additional furniture with various colors and materials will be added, allowing players to combine their room ambiance even more creatively. Each piece of furniture will be purchasable with TOOM when owning an NFT room.

This aspect is one of the most important elements of the entire game, so it will receive significant attention. For those who decide to participate in Ratings games, the aesthetic aspect of their room will greatly contribute to their success in the competition itself.

TOOM

TOOM is the primary aspect in the entire game and, alongside ETH, serves as a reward currency. It is an in-game currency with fixed price of 1TOOM = 0.001 ETH, allowing players to purchase TOOM for less Ethereum and receive more tokens. In addition to being a reward currency, TOOM also serves as a means of payment and a tool for purchasing non-NFT items and in-game accessories, thereby avoiding unnecessary fees for players.

TOOM Utility :
- purchase of non-NFT items
- purchase of room design locations
- reward token
- entry fee in Ratings
- upgrade of room levels
- purchasing of armour for avatars

XP

If players want to increase their daily rewards, they can do so using XP (Experience Points). These points are used for room levels and can be obtained through TOOM purchases, winning in Ratings, purchasing additional non-NFT items for the room, or clothing for the avatar.

Each room has a level from 1 to 100, and increasing room levels allows players to receive not only higher daily rewards in TOOM but also greater chances of winning in Ratings!

Commission

The hotel commission is an additional benefit for the most valuable rooms: Legendary, Mythical, and Special. Owners of these rooms will receive a commission from the hotel every month where they own their room. The commission will always be paid out in Ethereum.

These rooms offer investors who do not plan to actively play the game a passive income from the start, with the potential to get back their initial investment in just a few months! This commission is earned based on accommodation in one of the 6 available hotels.

Hotel	Commission	Commission for 1 Special room	Commission for 1 Mythical room	Commission for 1 Legendary room
Tesen	3,5%	0,83%	0,15%	0,04%
Fuido	3,5%	0,83%	0,15%	0,04%
Lofay	3,5%	0,83%	0,15%	0,04%
Stotes	3,5%	0,83%	0,15%	0,04%
Lovliof	3,5%	0,83%	0,15%	0,04%
Amialy	3,5%	0,83%	0,15%	0,04%

Avatars

Players will find the use of avatars in Premium games. Thanks to avatars, it will be possible to make free entry into Premium games. Participants only need to reach a certain level of their avatar by acquiring armour for TOOM, and they will be able to participate in these prestigious games with a valuable prize pool.

Additionally, apart from obtaining entry into Premium games for purchased parts of armour, active players obtain XP, which can be used to upgrade the level of their unique NFT room!

NFT

NFT key

NFTs boast a significant implementation in Tialoom. In order to offer the best experience to its fans, we have decided to create 7 rarits of NFT rooms in total of 45 000 NFTs + a Starter NFT room, which will enhance the entire game. For those looking to achieve their goals as quickly as possible, there is an option to acquire an NFT item that speeds up the room leveling process!

Rarity	Amount
Common NFT key	18 000
Uncommon NFT key	11 250
Rare NFT key	7 650
Epic NFT key	4 500
Legendary NFT key	2 250
Mythical NFT key	900
Special NFT key	450

NFT item

Players can obtain a specific NFT room by burning it. Both NFT items and NFT rooms have their rarity based on the corresponding burned NFT room.
In the game, players are given the opportunity to upgrade their room's level by holding NFT items, resulting in an increase in their daily profit!

NFT in-game utility

Non-fungible tokens play a crucial role in every aspect of our game. Thanks to them, players have the opportunity to experience unforgettable moments, build various types of income, and most importantly, connect with their friends online!

Through NFTs, the community is offered several options for in-game rewards, whether in Tialoom Investing or Tialoom Gaming.
These rewards can come in the form of in-game currency TOOM or the cryptocurrency Ethereum. Investors with initial capital have the opportunity to build diverse portfolio through a single purchased NFT room, which they can upgrade by holding NFT items if they wish. Conversely, active game users improve their chances of winning TOOM or ETH through playing daily. All this and much more awaits NFT enthusiasts in the Tialoom game!

Furthermore, to prevent the destruction of the game, a burning system will be implemented, allowing the community to grow while maintaining the game on a long-term basis. This system can be used to burn both NFT rooms and NFT items.

NFT room in-game utility :

- Daily Income in TOOM
- Commission from the hotel
- Lending & Selling
- Burning
- Entry into Ratings
- Room Design

Non-NFT item

Besides NFT items, the game also features non-NFT items that serve for all purchased furniture for rooms or armor for the player's avatar.

Presale NFT r.1, r.2

There are two rounds of NFT keys Presale expected, starting in Q3/2024 and continuing in Q1/2025. Both presales will follow the same process, which will be publicly announced in due time.

Marketplace

The implementation of the Marketplace is one of the key gaming features, allowing the Tialoom community to trade NFT rooms and various other in-game items, including both NFT and non-NFT items like room furniture and avatar's armor, which enhances players to design their room and avatar in their own way.
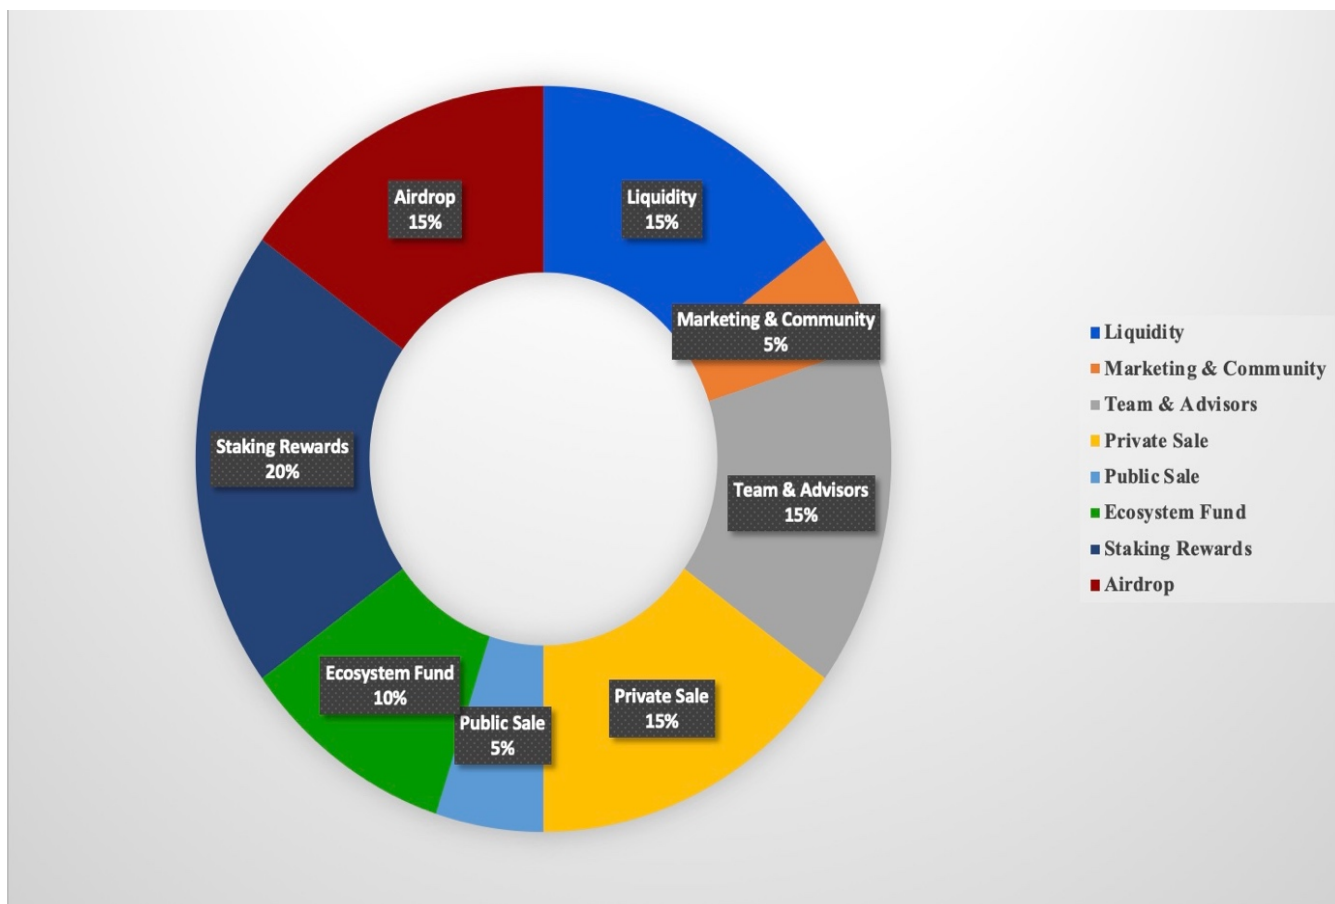

Tokenomics

Tialoom has scheduled the launch of its native token $TIAL, which will be used for in-game purchases, making it an integral part of the game. Although $TIAL will not play a role in the game from the beginning, its implementation will open up further possibilities for the game's development in the future.

Allocation

The native token $TIAL will turn the game Tialoom into a fully immersive experience. With a total supply of 177 777 777$TIAL, it will cover the distribution of tokens and, thanks to diverse in-game utilities, guarantee a continuous demand for the tokens.

Tialoom will not release all of its tokens at once to avoid significant sell pressure, and therefore, it will implement a Gradual unlock system. Gradual token unlocking not only prevents significant sell pressure but also increases interest in the market, potentially raising the price of $TIAL itself.

The Gradual unlock period for the Private and Public Sale will be 6 months, while for the Airdrop, it will be 1 year.

The community is a crucial part of every successful project, and therefore, our entire project relies heavily on the community. Apart from the Airdrop, we are pleased to announce that we have allocated a huge amount of $TIAL tokens from the total supply to our community as a reward for their ongoing support. These tokens will serve as rewards for community competitions, activity across all official servers, or help from the individuals to the team in maintaining an active community.

Utility

$TIAL will be a representative component of the entire game, and therefore, it is assigned significant in-game utilities as well as a large community value.

In the game, the token will serve as in-game currency used for various types of transactions, opening up a wide range of advanced possibilities for players.

Apart from its role in the game, $TIAL also holds significance for token holders who do not plan to play the game and prefer passive income alongside trading with $TIAL.

They can take advantage of the staking opportunity, which will offer, thankful to the token allocation, big staking rewards for holders of $TIAL.

Once Tialoom implements the token into the game, $TIAL will take over the following activities:

1. In-game Currency - $TIAL will become the primary in-game currency for purchases within the game
   - Payments for paid places in NFT room via $TIAL
   - Payments for NFT Lending via $TIAL
   - Purchase of premium avatar armour via $TIAL
   - Additional in-game assets can be bought via $TIAL
   - XP boost via $TIAL
   - Upgrade of non-NFT items via $TIAL
2. Game Economy - the implementation of $TIAL will help create a healthy in-game economy through trading, investments, and payments between players and the platform.
3. Community Development - The token will be used to support and reward active community members, promoting player growth and engagement.

Team

Back in the year 2023, the current Founder of Tialoom, Michal, had the idea to create a beneficial project for the company in the form of a play-to-earn game. At that time, it was not clear how the development would proceed, so we decided to join forces.

S.B.T. took on the role of Co-Founder and, thanks to his long-term passion for cryptocurrencies and P2E games, devised the uniqueness of Tialoom and its gameplay. His journey began back in 2018 when he first found out about cryptocurrencies and gradually became more interested in them, eventually heard about the most successful play-to-earn game, Axie Infinity. He has always loved playing games and therefore started studying more about this new way of earning online. However, from 2019 until now, he had not found a game where common people could earn a sight of money without any initial investment. That's what we want to change together in Tialoom, so that the profit potential without any investment depends only on the player's willingness to invest their time and thus build a sustainable system.

Ladislav took on the main role in game development. Lagemaxl has been programming in C# since 2018 and in JavaScript since 2021. During this time, he has mainly focused on web and game development. His work has already been reflected on the Tialoom website, and now he leads the development of the game itself.

Lukáš figures as the project's admin. He has been involved in the cryptocurrency world for over three years, being a true enthusiast of blockchain and cryptocurrencies from the beginning. With the experiences gained during this time, he decided to bring them to Tialoom to build a modern team and an active community based on the newest information. His presence in the team will not only benefit the project itself but also provide the entire community with huge opportunities for connection through the most recent technologies and trends in the rapidly changing blockchain world.

The experienced community manager and advisor KCWeb3, who is also involved in several other projects including NovaDex (DEX on Solana) and HotbitDex assists the entire team.

His years of experience enrich the entire Tialoom team, and his advice contributes significantly to important decisions for the entire project.

He is credited with building an active community and also with long-term work on developing a high-quality projects.

Community

The most crucial aspect of the product in Tialoom is its quality, ensuring sustainability and continuous evolution to meet further milestones. Throughout this journey, continual community support is for us crucial.

Therefore, we've allocated 5% of tokens to the community and will consistently reward the most dedicated Tialoom members during the game's development. Additionally, core community members can anticipate various rarities NFT keys prizes.

Whether you're excited about the game itself, passive income opportunities with $TIAL, or engaging in competitions during development, join our community on social platforms for early access to one of the most promising projects!
